

ECO-65[™]

THE SPECIALTY LOW-SLOPE ATTACHMENT FOR MEMBRANE ROOFS

ECO-65 is engineered specifically for use on new or existing (retrofit) low slope roofs. Countless ballasted solar racking manufacturers rely on it for weight-reduction augmentation and as a seismic attachment method. The ECO-65 base plate is designed to attach specifically to wood blocking or decking. The mount utilizes two studs for attachment, allowing the use of larger compression brackets.

FEATURES & BENEFITS

- Engineered for low slope roofs
- Specialized solution to match any proprietary hardware
- Wide footprint for optimum load dispersal
- Direct-to-deck attachment

WATERTIGHT SOLUTION COMPATIBLE WITH ANY RACKING SYSTEM
